

# Release Notes

World Weather, Weather midlet beta v.0.89.14  
September 2008

## Overview

The Web2Mobi World Weather, Weather midlet beta v.0.89.14 is a mobile client with features:

- Current weather and forecasts for all around the globe.
- Satellite images
- Multiple cities in a certain countries.
- In the USA and Canada you can use ZIP code as well.
- Database for locations you want to have forecasts

When you start the Weather application, you first create a database for locations which you want to have current weather and forecasts. To create a location, you first select the Country and continue to next step where you select the city, if there are cities to select, and temperature units. After selecting options you must save your location. There are not cities available for all the countries. If there are no cities to select, current weather and forecasts are shown for a capital of the selected country.

USA is an exception, there are no cities to select but you can use ZIP code instead of city.

After creating the location database, it is easy to retrieve current weather and forecasts by highlighting the location and pressing the joystick of the phone. You can get satellite images from Weather data screen by selecting Options and Get satellite images.

Location database is stored to memory and it remains even you close the application. It is easy to delete unwanted locations by Settings... and highlight a location you want to delete and open Options and select Delete.

## System Requirements

Basically all mobile phones with Java MIDP 2.0 and GPRS capability are valid. We have tested this client software with Nokia 2610 mobile phone and Nokia 6600 mobile phone.

In the network connections use accesspoint Internet. It is recommended to make some kind of data plan with your operator.

If you have knowledge running this client software in different mobile phone types please send information to **feedback (at) web2mobi (dot) net**. Use subject field in your email as a keyword like "Device information".

## Installation Instructions

You can download software to your PC and transfer it to your mobile phone via bluetooth or cable. Easier way is to go with your mobile phone default browser to

<http://www.web2mobi.net/downloads.wml> and download it straight to your mobile phone.

Please remember to remove old version from your mobile phone before installing the new version.

After installation you can change applications security settings with Manager. This allows convenient usage of application.

1. Start Manager from Menu.
2. Highlight application.
3. Press Options and select Settings.

4. Select Network access.
5. Select Ask first time.

You can do this also afterwards, if you like to run application at first stricter security settings.
